

Wedi Riolito

Achieve flush shower floors and flawless draining with the Riolito shower system!

The Wedi Fundo Riolito's innovative design and precise engineering ensure tight sealing, ideal sloping and thorough draining via a linear channel drain. Water drains through a narrow gap between the cover plate and adjacent tile. Pre-assembled and lightweight, the Riolito is extremely versatile and simple to install.

Riolito shower pans are available in 3'x5' and 4'x6' sizes and offer a choice of three adjustable stainless steel cover plate options: Standard, Deluxe, and Tile Ready. By adjusting the cover plate height, the Standard and Deluxe channel cover plates can be combined with a wide range of tiles or natural stone coverings. The Tile Ready cover plate allows for 1/4" or 1/2" thick tiles to be bonded directly into the cover plate's reversible "U" channel allowing water to magically disappear through an "invisible" drain.

Wedi Riolito shower pans come equipped with an easy to install factory integrated PVC drain system that connects to a standard 2" PVC pipe.

These unique and fully pre-fabricated tile-ready units have opened up a whole new world of design possibilities for wet rooms and bathrooms.

Riolito - superior performance leads to worry-free showering. It's the ultimate flush floor wet room/bathroom solution.
